Open to full-time roles, projects and collaborations

SUMMARY

AI engineer and product builder with more than a decade in client-facing project delivery, including 4.5 years in enterprise customer success and AI adoption at Ryte (acquired by Semrush) and e-bot7 (acquired by LivePerson). Founder of ManeMap, an AI-powered care app for horse owners that I designed and built end to end — live on the App Store and Google Play since May 2026 with paying subscribers. I combine enterprise account ownership, technical rollouts and customer enablement with hands-on work in LLM integration, RAG, backend and mobile development. Open to full-time roles, projects and collaborations across AI engineering, AI product and adoption.

EXPERIENCE

Founder & AI Engineer — ManeMap (The Rohns UG)

08.2025 – present · Remote

Stack: Kotlin · Compose Multiplatform · Supabase (PostgreSQL, Row Level Security, Edge Functions in Deno/TypeScript, pgvector) · Gemini · RAG · RevenueCat · Claude Code

– Built and shipped ManeMap solo — an AI-powered horse care app for first-time owners in the DACH market — to the App Store and Google Play (live since 05.2026), earning recurring revenue from paying subscribers on monthly and annual plans.
– Architected Milo, a RAG-based AI assistant: vector search (pgvector, 768-dimension embeddings) over a curated bilingual DE/EN veterinary knowledge base, combined with horse profile, live weather and training history into daily care advice.
– Built layered health-safety controls: deterministic emergency patterns and a second model classifier identify active incidents before generation; server-side output sanitisation removes unsafe medication detail and internal labels afterwards.
– Wrote a regression test suite for the assistant covering emergency detection, retrieval quality and context retention, run before each release to catch safety-gate regressions.
– Rebuilt the app natively in Kotlin / Compose Multiplatform, self-built since 04.2026, after managing an external React Native team for the first version.
– Developed the Supabase backend: PostgreSQL data model, row-level security, serverless Edge Functions and content pipelines, with stage-level request timing instrumented across the pipeline.
– Run an AI-assisted development workflow with Claude Code and MCP tool integrations for coding, QA and store releases.
– Designed and hardened a public LLM assistant against prompt injection, rate-limit abuse and IP spoofing, documented the threat model, and put it through independent AI-assisted security reviews before release.

Senior Customer Success Manager — Ryte GmbH (acquired by Semrush)

08.2022 – 09.2025 · Remote

Tools: Ryte Website User Experience & SEO platform · Jira · Confluence

– Promoted from Customer Success Manager to Senior Customer Success Manager within 12 months (09.2023) based on portfolio performance.
– Retained and renewed a €10k/month enterprise account that began adversarially — the client sought early exit with legal involvement weeks after signing — turning it around to a full renewal before the contract term ended.
– Drove renewal and expansion across enterprise accounts, owning the full lifecycle from onboarding and success planning through QBRs.
– Supported enterprise accounts across DACH and international markets, working with both consumption-based and seat-based usage models to identify adoption and expansion opportunities.
– Helped build an automated onboarding system and monitored product usage to make adoption work across a large account portfolio.
– Led coordination between Product, Engineering and Sales to resolve technical blockers and feed client needs into the roadmap.
– Drove adoption of new AI-powered SEO features in client workflows and built customer success playbooks with defined KPIs.

Customer Adoption Manager — e-bot7, AI for Customer Service (acquired by LivePerson)

02.2021 – 07.2022 · Hybrid

Tools: conversational AI platform · enterprise chatbot deployments

– Took enterprise customer-service teams live on AI chatbots, owning onboarding and rollout against adoption and satisfaction KPIs.

– Owned configuration and integrations from setup through go-live: conversation flows, NLU training data, fallback and escalation rules, live-agent handover, channels and customer REST APIs.
– At Vienna Airport, routed unanswered traveller questions into Zendesk tickets and onboarded the dedicated bot manager to own content and flow updates after launch.
– Analysed adoption metrics and usage patterns to find friction points and feed product improvements.
– Worked with Product, Sales and Engineering across global teams; customised embedded chat interfaces (CSS).

Consultant — eXperts consulting center, Munich
03.2020 – 01.2021

– Recruited and placed IT and engineering specialists and executives; ran the full sales cycle from prospecting to close.

Project Manager — Move-Ment.net, Spain & Germany
09.2011 – 02.2020 · project-based from 2018

– Planned and delivered client and event projects across cross-functional teams; applied lean methods to streamline workflows.

TECHNICAL ARCHITECTURE & DECISIONS

– **Milo request path and safety:** classify health risk first, retrieve with pgvector, assemble horse and live context, generate with Gemini, then sanitise the output before delivery.
– **Stack decisions:** kept data, authentication, Edge Functions and vector retrieval in Supabase; moved from the externally managed React Native version to one shared Kotlin / Compose Multiplatform codebase that I build and release directly.
– **Verification:** regression tests cover emergency detection, retrieval quality and conversation context; stage-level timings expose embedding, retrieval and model latency.
– **Ownership:** I own the product direction, architecture, data model, safety logic, evaluation strategy and release decisions. Claude Code and MCP integrations accelerate implementation, QA and store work.

SKILLS

– **AI & LLM:** RAG architecture, vector search (pgvector), embeddings, prompt engineering, LLM safety gating, LLM evaluation and regression testing, prompt-injection defence, Gemini, Claude / Anthropic API, OpenAI API, AI agents, Claude Code for AI-assisted development, MCP tool integrations
– **Engineering:** Kotlin, Compose Multiplatform, Supabase, PostgreSQL, Row Level Security, Edge Functions (Deno / TypeScript), REST APIs, RevenueCat, App Store and Google Play releases
– **Automation:** business process automation, Make.com, Zapier, API integrations
– **Delivery:** AI adoption and rollouts, enterprise customer success, stakeholder management, project management, Jira, Confluence, monday.com

CERTIFICATIONS & EDUCATION

– AI Agent Bootcamp — AI Academy (2025)
– Foundations of AI — AI Academy (2024)
– Generative AI Overview for Project Managers — Project Management Institute (2024)
– Artificial Intelligence for Project Managers — LinkedIn Learning, PMI-approved course (2024)
– Introduction to Microsoft 365 Copilot — Microsoft (2023)
– Generative AI Learning Path — Google Cloud Skills Boost (2023)
– Career Essentials in Generative AI — Microsoft & LinkedIn (2023)
– Digital Marketing & E-commerce Certificate — Coursera / Google (2023)
– ThePowerMBA — online business program (2020 – 2022)
– Business Administration certificates — Harvard Business Publishing (2021 – 2022)
– Project Management — IHK Akademie (2019)
